

Java

```
class Solution {  
    public int prefixConnected(String[] words, int k) {  
        }  
    }  
-----
```

JavaScript

```
/**  
 * @param {string[]} words  
 * @param {number} k  
 * @return {number}  
 */  
var prefixConnected = function(words, k) {  
};  
-----
```

TypeScript

```
function prefixConnected(words: string[], k: number): number {  
};  
-----
```

C++

```
class Solution {  
public:  
    int prefixConnected(vector<string>& words, int k) {  
        }  
};  
-----
```

C#

```
public class Solution {  
    public int PrefixConnected(string[] words, int k) {  
        }  
}
```

Kotlin

```
class Solution {  
    fun prefixConnected(words: Array<String>, k: Int): Int {  
    }  
}
```

}

Go

```
func prefixConnected(words []string, k int) int {
```

```
}
```
